NEW RESIDENTIAL CONSTRUCTION

JANUARY 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions, will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex).
Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

FEBRUARY 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

MARCH 1963

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

APRIL 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

APRIL 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

JUNE 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

JULY 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

AUGUST 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

OCTOBER 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

NEW RESIDENTIAL CONSTRUCTION

NOVEMBER 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

NEW RESIDENTIAL CONSTRUCTION

DECEMBER 1963

(Urban Centres of 5,000 population and over)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

To provide comparability, the current data for 1963 and the data for the corresponding period of 1962 are presented in these tables on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of a dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

JANUARY 1964

JANVIER 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in This Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplets détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplets attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simplets attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

Major urban areas -- Grandes agglomérations urbaines(1)	3,400	258	107	2,097	5,862
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	4,317	458	108	2,026	6,909
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	27,932	4,302	2,756	46,135	81,125

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

FEBRUARY 1964

FÉVRIER 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	27,008	4,312	2,453	45,142	78,915

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

MARCH 1964

(Urban Centres of 5,000
population and over)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

MARS 1964

(Agglomérations urbaines de 5,000
habitants et plus)Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle l'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achevements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

TABLE M-17. Summary: Starts, Completions and Under Construction, Metropolitan, Major Urban and Other Areas, March 1964

TABLEAU M-17. Sommaire: Mises en chantier, achèvements et logements en construction dans les zones métropolitaines, les grandes agglomérations urbaines et autre agglomérations, mars 1964

(Dwelling units -- Unités de logement)

Area -- Zone	Single detached -- Simple détachés	Two- family -- Bi- familiaux	Row -- Rangées	Apartment and other -- Appartements et autres	Total
<u>Starts -- Mises en chantier</u>					
Metropolitan areas -- Zones métro- politaines	1,463	264	173	2,925	4,825
Major urban areas -- Grandes agglomérations urbaines(1)	206	15	-	57	278
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	226	25	45	153	449
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	1,870	302	218	3,135	5,525
<u>Completions -- Achèvements</u>					
Metropolitan areas -- Zones métro- politaines	10,120	1,391	417	5,195	17,123
Major urban areas -- Grandes agglomérations urbaines(1)	1,743	141	39	449	2,372
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	2,017	216	15	485	2,733
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	13,665	1,740	466	6,125	21,996
<u>Under construction -- En construction</u>					
<u>March - 31 - Mars</u>					
Metropolitan areas -- Zones métro- politaines	12,020	2,513	2,062	38,699	55,294
Major urban areas -- Grandes agglomérations urbaines(1)	1,473	135	47	1,688	3,343
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	2,289	270	114	1,671	4,344
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	15,449	2,904	2,222	41,960	62,535

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

APRIL 1964

AVRIL 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome appartenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achevements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empiètement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empiètement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplex détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplex attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

<u>April - 30 - Avril</u>					
Metropolitan areas -- Zones métropolitaines	10,896	2,152	1,941	36,653	51,642
Major urban areas -- Grandes agglomérations urbaines(1)	1,400	160	104	1,682	3,346
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	1,888	168	120	1,786	3,962
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	13,897	2,474	2,165	40,004	58,540

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

habitants et plus)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplets détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplets attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simplets attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

Major urban areas -- Grandes agglomérations urbaines(1)	1,919	240	147	2,278	4,584
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	2,195	202	109	1,746	4,252
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	15,849	2,738	2,091	41,914	62,592

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

JUNE 1964

JUIN 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achevements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplex détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplex attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

TABLE M-17. Summary: Starts, Completions and Under Construction, Metropolitan, Major Urban and Other Areas, June 1964

TABLEAU M-17. Sommaire: Mises en chantier, achèvements et logements en construction dans les zones métropolitaines, les grandes agglomérations urbaines et autre agglomérations, juin 1964

(Dwelling units -- Unités de logement)

Area -- Zone	Single detached -- Simple détachés	Two- family -- Bi-familiaux	Row -- Rangées	Apartment and other -- Appartements et autres	Total
<u>Starts -- Mises en chantier</u>					
Metropolitan areas -- Zones métropolitaines	3,020	436	324	6,188	9,968
Major urban areas -- Grandes agglomérations urbaines(1)	855	114	52	654	1,675
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	860	77	20	360	1,317
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	4,535	603	396	7,155	12,689
<u>Completions -- Achèvements</u>					
Metropolitan areas -- Zones métropolitaines	1,724	310	195	4,137	6,366
Major urban areas -- Grandes agglomérations urbaines(1)	314	11	-	220	545
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	366	16	12	300	694
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	2,344	336	207	4,563	7,450
<u>Under construction -- En construction</u>					
<u>June - 30 - Juin</u>					
Metropolitan areas -- Zones métropolitaines	13,099	2,427	1,913	40,144	57,583
Major urban areas -- Grandes agglomérations urbaines(1)	2,423	339	199	2,702	5,663
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	2,647	259	117	1,808	4,831
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	17,660	2,992	2,229	44,537	67,418

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

JULY 1964

(Urban Centres of 5,000
population and over)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

JUILLET 1964

(Agglomérations urbaines de 5,000
habitants et plus)Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de toute autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

TABLE M-17. Summary: Starts, Completions and Under Construction, Metropolitan, Major Urban and Other Areas, July 1964

TABLEAU M-17. Sommaire: Mises en chantier, achèvements et logements en construction dans les zones métropolitaines, les grandes agglomérations urbaines et autre agglomérations, juillet 1964

(Dwelling units -- Unités de logement)

Area -- Zone	Single detached -- Simple détachés	Two- family -- Bi- familiaux	Row -- Rangées	Apartment and other -- Appartements et autres	Total
<u>Starts -- Mises en chantier</u>					
Metropolitan areas -- Zones métropolitaines	3,004	439	197	7,938	11,578
Major urban areas -- Grandes agglomérations urbaines(1)	775	43	6	674	1,498
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	837	85	-	350	1,272
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	4,460	565	203	8,962	14,190
<u>Completions -- Achèvements</u>					
Metropolitan areas -- Zones métropolitaines	2,516	411	250	4,562	7,739
Major urban areas -- Grandes agglomérations urbaines(1)	431	52	-	464	947
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	492	52	22	280	846
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	3,371	511	272	5,306	9,460
<u>Under construction -- En construction</u>					
<u>July - 31 - Juillet</u>					
Metropolitan areas -- Zones métropolitaines	13,586	2,457	1,861	43,475	61,379
Major urban areas -- Grandes agglomérations urbaines(1)	2,764	330	205	2,912	6,211
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	2,984	296	95	1,868	5,243
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	18,738	3,052	2,161	48,138	72,089

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

AUGUST 1964

AOÛT 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplets détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplets attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simplets attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

TABLE M-17. Summary: Starts, Completions and Under Construction, Metropolitan, Major Urban and Other Areas, August 1964

TABLEAU M-17. Sommaire: Mises en chantier, achèvements et logements en construction dans les zones métropolitaines, les grandes agglomérations urbaines et autre agglomérations, août 1964

(Dwelling units -- Unités de logement)

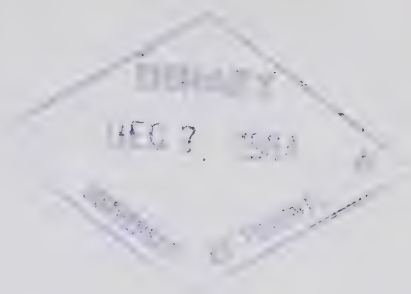

Area -- Zone	Single detached -- Simple détachés	Two- family -- Bi- familiaux	Row -- Rangées	Apartment and other -- Appartements et autres	Total
<u>Starts -- Mises en chantier</u>					
Metropolitan areas -- Zones métropolitaines	2,863	449	294	6,340	9,946
Major urban areas -- Grandes agglomérations urbaines(1)	659	34	8	387	1,088
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	653	54	4	289	1,000
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	4,053	537	306	7,016	11,912
<u>Completions -- Achèvements</u>					
Metropolitan areas -- Zones métropolitaines	2,417	485	221	4,064	7,187
Major urban areas -- Grandes agglomérations urbaines(1)	541	26	10	133	710
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	429	51	4	199	683
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	3,298	560	235	4,396	8,489
<u>Under construction -- En construction</u>					
<u>August - 31 - Août</u>					
Metropolitan areas -- Zones métropolitaines	14,040	2,439	1,934	45,730	64,143
Major urban areas -- Grandes agglomérations urbaines(1)	2,878	338	203	3,166	6,585
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	3,213	300	95	1,948	5,556
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	19,503	3,048	2,232	50,727	75,510

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

SEPTEMBER 1964

SEPTEMBRE 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas en plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de toute autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

Metropolitan areas -- Zones métropolitaines	14,091	2,208	2,247	45,887	64,433
Major urban areas -- Grandes agglomérations urbaines(1)	2,794	346	200	3,147	6,487
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	3,163	269	100	1,804	5,336
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	19,425	2,795	2,547	50,699	75,466

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

OCTOBER 1964

OCTOBRE 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome appartenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empiètement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empiètement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplets détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplets attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simplets attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de toute autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

Major urban areas -- Grandes agglomérations urbaines(1)	648	70	4	547	1,269
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	753	64	8	359	1,184
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	4,414	614	332	7,322	12,682
<u>Under construction -- En construction</u> <u>October - 31- Octobre</u>					
Metropolitan areas -- Zones métropolitaines	13,879	1,978	2,587	46,308	64,752
Major urban areas -- Grandes agglomérations urbaines(1)	2,983	328	218	3,083	6,612
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	3,263	308	374	1,816	5,761
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	19,505	2,596	3,170	51,089	76,360

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

November 1964

Novembre 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empiètement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empiètement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclut:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de toute autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

Major urban areas -- Grandes agglomérations urbaines(1)	3,531	414	207	3,899	8,051
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	4,049	532	385	2,324	7,290
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	24,167	3,781	3,277	54,451	85,676

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.

Décembre 1964

(Urban Centres of 5,000
population and over)(Agglomérations urbaines de 5,000
habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year - at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q. In the remaining months, statistics are available only for the centres of 5,000 population and over (including the Metropolitan areas and Major Urban Areas). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. The monthly tables follow the quarterly tables in the reports containing quarterly data for all areas.

Publication

The responsibility for this publication has been transferred as of January 1, 1963, from the Special Surveys Division to the Business Finance Division. The regular users of the statistical series of starts and completions will notice the change in the presentation of the data from the previous publications. It is possible that further changes will be introduced in the future keeping in mind the interest of the users.

The Metropolitan Areas, Major Urban Areas and Urban Centres of 5,000 population and over have been defined according to the 1961 Census. Although the Census does not classify them as such, the cities of Regina and Saskatoon have been included in this publication as Major Urban Areas.

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, toutes les grandes agglomérations urbaines et toutes les agglomérations de 5,000 habitants et plus font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 5,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux mensuels suivent les tableaux trimestriels.

Publication

Le 1^{er} janvier 1963, la responsabilité de la présente publication est passée de la Division des enquêtes spéciales à celle des finances des entreprises. Les usagers habituels de la série portant sur les mises en chantier et les achèvements remarqueront que dans le présent rapport les données ne sont pas présentées exactement comme dans les publications antérieures. Il se peut que d'autres changements soient aussi apportés plus tard, dans l'intérêt même de l'utilisateur.

Les zones métropolitaines, les grandes agglomérations urbaines et les agglomérations de 5,000 habitants et plus ont été définies d'après les normes du recensement de 1961. Même si le recensement ne les classe pas en tant que telles, les villes de Regina et de Saskatoon figurent dans le présent rapport comme grandes agglomérations urbaines.

The data published since January 1963 are on the basis of the 1961 Census. Therefore statistics on particular areas are not always strictly comparable with those presented in publications issued prior to 1963 which were using area delimitations and population data based on earlier Censuses.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling unit are: each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversions". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boathouses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

Depuis janvier 1963, les données sont présentées dans les tableaux en conformité de la base du recensement de 1961. Il s'ensuit que les chiffres concernant certaines régions en particulier ne sont pas toujours strictement comparables à ceux fournis dans les publications antérieures à 1963, qui se fondaient sur les délimitations géographiques et les données démographiques des recensements précédents.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'"unité de logement". Pour toute période donnée, l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tout plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure -- habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwellings structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with Tabulations Presented in this Report

The 1961 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajustements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement avec ceux du présent rapport

Le recensement de 1961 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent

simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1961 Census are not enumerated in the Starts and Completions Survey.

partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenante à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simples détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

Autrement dit, cette catégorie inclus:

- (i) les doubles duplex.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1961 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

TABLE M-17. Summary: Starts, Completions and Under Construction, Metropolitan, Major Urban and Other Areas, December 1964

TABEAU M-17. Sommaire: Mises en chantier, achèvements et logements en construction dans les zones métropolitaines, les grandes agglomérations urbaines et autres agglomérations, décembre 1964

(Dwelling units -- Unités de logement)

Area -- Zone	Single detached -- Simple détachés	Two- family -- Bi- familiaux	Row -- Rangées	Apartment and other -- Appartements et autres	Total
<u>Starts -- Mises en chantier</u>					
Metropolitan areas -- Zones métropolitaines	4,234	751	526	4,383	9,894
Major urban areas -- Grandes agglomérations urbaines(1)	784	44	6	302	1,136
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	701	92	65	397	1,255
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	5,603	885	597	5,078	12,163
<u>Completions -- Achèvements</u>					
Metropolitan areas -- Zones métropolitaines	2,296	283	341	3,230	6,150
Major urban areas -- Grandes agglomérations urbaines(1)	538	29	14	283	864
Other centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	627	60	50	176	913
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	3,345	368	405	3,689	7,807
<u>Under construction -- En construction</u> <u>December - 31 - Décembre</u>					
Metropolitan areas -- Zones métropolitaines	19,228	3,390	2,888	49,435	74,941
Major urban areas -- Grandes agglomérations urbaines(1)	3,765	427	174	3,873	8,239
Other Centres of 5,000 population and over -- Autres agglomérations de 5,000 habitants et plus	4,112	571	472	2,473	7,628
All centres of 5,000 population and over -- Toutes agglomérations de 5,000 habitants et plus	26,409	4,359	3,525	55,657	89,950

(1) Major urban areas include data corresponding to the areas as shown in table M-14 for these centres; this includes house-building activity in the fringe areas of major urban centres, even though these areas are under 5,000 population. The data for these fringe areas under 5,000 population are excluded from total shown for all centres of 5,000 population and over. Consequently this last total is smaller than the sum of the three preceding totals -- Les grandes agglomérations urbaines incluent les données correspondant aux zones telles que présentées dans le tableau M-14 pour ces agglomérations; ceci comprend la construction domiciliaire dans les banlieues, même si ces zones ont une population inférieure à 5,000 habitants. Les données pour les banlieues de moins de 5,000 habitants sont exclues du total indiqué pour toutes les agglomérations de 5,000 habitants et plus. Par conséquent, ce dernier total est inférieur à l'addition des trois totaux précédents.
